## WHAT I DO

---

I'm the founder of **Zelos Arenas**, a cash-prize tournament platform live on iOS and Android. I designed and built the whole thing end to end — bracket logic, matchup engine, live scoring, marketplace payouts, App Store and Play Store review cycles. React Native and Expo on the front, Firebase and Stripe Connect on the back.

Alongside Zelos, I built and run **Zed** — a production multi-agent system that handles outbound and lead qualification 24/7. Three agents (local Qwen, Gemini, Claude) routed by task complexity, with a full GTM pipeline: scrape, enrich, dedup, human-in-the-loop approval, send.

Earlier in my career I was an ML engineer at **DHI Group (Dice.com)**, working on search relevance and the core matching algorithm. Before that, two stints at **Apple** — Elasticsearch matching for the MDM team (150× faster, 99.8% accuracy at the time), and PySpark pipelines over 25B+ daily events on Apple Music.

## WHAT I'M TAKING ON

---

I'm currently available for senior contract engagements. The work I'm best at:

- ▶ **Mobile and full-stack builds** — React Native, Expo, Firebase, Stripe Connect, marketplaces with real users and real money
- ▶ **AI and agent systems** — Anthropic API, Gemini, local LLMs, multi-agent orchestration, RAG, tool use
- ▶ **ML and search** — Elasticsearch / OpenSearch at scale, relevance tuning, recommendation systems
- ▶ **Senior IC engagements** — early-stage companies that need senior engineering judgment but aren't ready for a full-time hire

Also happy to take on smaller, shorter jobs — websites that need fixing, automations replacing manual ops, AI integrations for businesses that don't know where to start.

## HOW TO REACH ME
